Production Description

Fiberglass reinforced plastic (FRP) grating, also known as fiberglass grating, is a type of plate-like material with many spaces, which is made of fiberglass reinforced material and unsaturated polyester resin as the matrix through special processing and composite. FRP grating can be used as a structural material for floors, trench covers, platforms, ship decks stairs, walkways, etc. in corrosive environments. Featuring non-magnetic insulation, bright colors, and various styles and forms to choose from, there are three main types of production processes: reciprocating fiber winding process, continuous fiber winding process, and centrifugal casting process.
